

YASIR YOUNUS

New York, NY yyproton168@gmail.com [linkedin.com/in/yasir-younus-91551a281](https://www.linkedin.com/in/yasir-younus-91551a281) yyportfolio-xi.vercel.app/

EDUCATION

CUNY Lehman College

Bachelor of Science in Computer Science

Expected Aug. 2026

The Bronx, New York

Relevant Coursework: Database Systems, Videogame Programming, Full-Stack Web Development, Machine Learning, Design Analysis of Algorithms, Artificial Intelligence (Python, PyTorch via Google Colab), Data Structures Algorithms

SKILLS

Languages: Python (Intermediate), Java (Intermediate), Javascript (Intermediate), HTML, CSS, C++, MySQL, SQL

Frameworks / Libraries: Bootstrap, React, Vite, Flask, Next.js, Node.js, Tailwind CSS, Applet

Platforms / Deployments: VS Code, Eclipse, Git/GitHub, Vercel, Firebase, Windows, MacOS, Microsoft 365, Google Workspace

Certifications: Codepath Intro to Web Dev, IBM Professional Skills, Google Technical Support Fundamentals, AWS AI Practitioner

EXPERIENCE

College Assistant - Peer/Coding Tutor

March 2026 – Present

CS LAB - CUNY Lehman College

The Bronx, New York

- Mentored **100+ CS/CIS students** in mastering core concepts across **Python, Java, and Web Development**, directly contributing to a measurable **increase in department-wide pass rates** for introductory programming courses.
- Facilitated **technical workshops and 1-on-1 sessions** for advanced topics including Data Structures & Algorithms and Computer Organization, simplifying complex logic to help students improve their project grades by an average of **15-20%**.
- Debugged and **optimized diverse codebases** for students, **resolving critical logic errors** and teaching best practices in functional programming and dry-code principles to ensure long-term scalability of student projects.

Software Engineer Intern

March 2026 – May 2026

Uptown & Boogie Healthy Project (Non-Profit Org)

Harlem, New York

- Resolved pagination errors and overarching bugs across the Community Supported Agricultural (CSA) farm-share dashboard, **boosting user productivity by 50%**.
- Engineered **responsive new features** and resolved critical design bugs using **Typescript and Tailwind CSS**, improving platform stability by **75%** and making the dashboard **seamlessly accessible** on smaller displays.
- Transformed a **React web application into a compliant Progressive Web App (PWA)** by configuring custom web app manifests (manifest.json), increasing cross-platform accessibility by **40%** and **enabling seamless mobile installability**.
- Scaled customer support to **100+ users** by integrating a **Chatbase AI interface**, decreasing company expenditure on high-cost AI APIs through optimized third-party implementation.

PROJECTS

DeathTag - Maze Videogame | Java 1.8, Applet

github.com/yyounir/deathTag

- Designed and implemented a **deterministic AI tracking system** in **Java** utilizing inheritance and **coordinate-based delta** thresholds for smooth enemy pursuit (chase) and flight (evade) mechanics.
- Optimized **memory management** by utilizing efficient **data structures** for map generation, ensuring smooth **60 FPS** performance during active entity tracking.

Resume.GPT - AI Resume Reviewer | React Router, Typescript, Puter.js, Node.js,

github.com/yyounir/Resume.GPT

- Developed an **AI-powered resume review web application** that delivers comprehensive Applicant Tracking System (ATS) compatibility scores and targeted feedback, by integrating **Claude Sonnet 4.6** and **PDF.js** within a **React 19** and **Vite** frontend.
- Increased application efficiency by **50%** and mitigated AI token limit errors, by engineering precise test prompts that guide the **Claude model** to consistently output valid, **parsable JSON data**.
- Architected a **secure, serverless cloud ecosystem** capable of managing **cross-device user authentication** and personal document storage, by leveraging **Puter.js** for backend services alongside **Tailwind CSS v4** for fully responsive UI design.
